WHY CHOOSE AMTAC

Decades of experience manufacturing some of the most complex and exacting components ever built give us the confidence to go far beyond traditional suppressor design. Our suppressors aren't about chasing numbers. They're created to integrate seamlessly into your weapon system and deliver tack-driving performance down range.

- Over-barrel design to add only 3.7" of length to your rifle.
- High-volume over-barrel chamber for greatly reduced gas blowback.
- Reduced swing weight for faster target transitions and more maneuverability.
- Direct thread suppressors that rival the speed of QD mounts while increasing accuracy.

WHY OVER BARREL

Traditional suppressors add length, weight and increase blowback when used on direct impingement rifles. To address these problems, many AMTAC suppressors feature an over-barrel design that integrates a high-volume initial blast chamber attached to a short, single piece baffle structure.

- Minimal Added Length
- Reduced Gas Blowback
- Dependable Accuracy
- Full-Auto Rated (& Encouraged)
- Patented Design
- Limited Lifetime Warranty

AMTAC MODEL COMPARISON GUIDE

MODEL	CALIBER	ADDED LENGTH	OVER BARREL	DIAMETER	WEIGHT	THREAD	MAX BARREL DIA	SUPPRESSION
TAO	.22LR	5.3"	N/A	1"	5.75 oz	1/2 x 28	N/A	up to 37db
KU	9MM	3.7"	4"	1.62"	16.6 oz	1/2 x 36	0.75	up to 30db
